

Please Goto the website <https://demowebshop.tricentis.com/> and get yourself familiar with it. Click around to explore different options and functionalities, note that this site will allow you to place a dummy order.

Use Case:

1. As a user you should be able to register and login successfully.
2. As a user, you should be able to search for different items like jeans , laptop , desktop, gift card etc. [Any item of your choice].
3. As a user, you should be able to add items to the cart. [Try adding items from different categories (Min:2 and Max:5)]
4. As a user, you should be able to checkout and buy the items successfully.

Assignment:

- Please write test cases for the above mentioned use-cases.(should cover negative scenarios as well).You can write as many test cases as you want covering the entire use case.
- Please prioritize the test cases.
- Write the test cases in an excel file in your familiar format.
- Pick any of the 2 use-cases and write an automation script. Use case 1 is mandatory as you need to first register the user to make the purchase. [You can use any tool /scripting language of your choice. (Please avoid UI based tools like Tosca)]
